# wholesale price cost effective stable high efficiency mppt controller home UPS inverter 2000w

## Introduction

Pure sine wave inverter with built-in MPPT controller IP-HPC-Series is a module design. It has the advantages of high conversion efficiency, low power consumption and strong load-carrying ability. With intelligent control, users can set charging mode, (Utility as complementary power) AC first mode or DC first mode, timing inversion mode and timing utility mode, on / off mode It is one of advanced hybrid inverter & amp; controller in the world.

# Application

- 1.Off-grid solar power system
- 2. Solar and utility complementary power system

#### Feature

- 1. Easy to install. To configure a solar system, users just need to connect it with solar panels and batteries
- 2.CPU management, intelligent control, modular design, LCD display
- 3.Built-in MPPT controller, high charging efficiency
- 4.Low power consumption, high conversion efficiency
- 5.Intellectual, multi-function, it's convenient for users to make full use of solar energy in different situation
- 6. External battery connection, it's convenient for users to expand back-up power time
- 7.Strong load-carrying ability, low failure rate, easy to maintenance and long service life (under proper operation, it can last at least 5 years)
- 8.Perfect protection: low voltage protection, high voltage protection, over temperature protection, short-circuit protection, overload protection
- 9.CE / EMC / LVD / RoHS Approvals
- 10.Two years warranty, life-long technical support

#### **Function**

- 1. Charging function
- 1.1 PV only mode: when PV and utility are both connected to the inverter, only the PV will charge the battery while utility will not charge the battery.
- 1.2 PV + AC hybrid mode: when PV and utility are both connected to the inverter, both PV and utility will charge the battery.

- 2. Utility as complementary power UPS function
- 2.1AC first, DC standby UPS mode

When utility and battery are connected to the inverter, utility will supply power to the loads preferentially. When utility is cut off, the battery will automatically continue to supply power to the loads.

#### Steps are as follows:

Step 1: When utility power is available, it will drive the loads directly after voltage being stabilized and

charge batteries at the same time.

- Step 2: When utility power is cut off suddenly, the inverter will convert DC to AC automatically to ensure uninterrupted power supply within 5ms.
- Step 3: When utility power is available again, it will automatically transfer to utility supplying power to loads and charge batteries at the same time.

#### 2.2DC first, AC standby UPS mode:

When utility and battery are connected to the inverter, battery will supply power to the loads prior to utility. When battery capacity is not enough, utility will continue to supply power automatically.

## Steps are as follows:

- Step 1: When battery has enough power, it will drive the loads directly via power inverter
- Step 2: When battery does not have enough power, it will automatically transfer to utility supplying power to the loads
- Step 3: After the battery is fully charged (eg by solar or wind charge controller), it will automatically transfer to battery supplying power to the loads.

## 3.Timing function

- 3.1 On / Off mode: Users can set specific time to turn on / off the output of the inverter.
- 3.2 Working mode: Battery or utility switchable mode Users can set specific time when to use battery or utility supplying power (suitable for areas where electric fee is charged differently in different period).

#### 4.Recording / checking function

- 4.1 Inverter fault checking: Users can check the inverter fault information
- 4.2 Discharge time checking: Users can check the discharge time of the battery

#### Parameter

Parameter Model		1000W	1500W	2000W	3000W	4000W	5000W		
Rated Output Power		1000W	1500W	2000W	3000W	4000W	5000W
